	Sommario/riassunto	A faith-based policy governed key features of the American invasion of Iraq, including the choice of a self-defeating "Shock and Awe" strategy, and the grossly mismanaged occupation. A religious rationale likewise blinded devotees of the White House torture program to the predictable cost in American lives, and the damage to America's moral standing.

The Bush administration embraced an imperialist Christian militarism that unites elements of classic Puritan tradition with the mythology of the Western frontier. Faith-Based War brings into focus this dangerous perversion of Christian teaching, an

	Nota di contenuto	Intelligent systems and informatics (I) -- Multimedia computing and social networks -- Hybrid Intelligent systems -- Cloud Computing and Big Data Mining.
	Sommario/riassunto	The conference topics address different theoretical and practical aspects, and implementing solutions for intelligent systems and informatics disciplines including bioinformatics, computer science, medical informatics, biology, social studies, as well as robotics research. The conference also discuss and present solutions to the cloud computing and big data mining which are considered hot research topics. The conference papers discussed different topics – techniques, models, methods, architectures, as well as multi aspect, domain-specific, and new solutions for the above disciplines. The accepted papers have been grouped into five parts: Part I—Intelligent Systems and Informatics, addressing topics including, but not limited to, medical application, predicting student performance, action classification, and detection of dead stained microscopic cells, optical character recognition, plant identification, rehabilitation of disabled people. Part II—Hybrid Intelligent Systems, addressing topics including,

but not limited to, EMG signals, text classification, geomagnetic inverse problem, email filtering. Part III—Multimedia Computing and Social Networks, addressing topics including, but not limited to, augmented reality, telepresence robot, video flash matting, community detection, quality images, face thermal image extraction, MRI tumor segmentation. Part V—Cloud Computing and Big Data Mining, discussing topics including, but not limited to,mining on microblogs, query optimization, big data classification, access control, friendsourcing, and assistive technology. Part VI—Swarm Optimization and Its Applications, addressing topics including, but not limited to, solving set covering problem, adaptive PSO for CT liver segmentation, water quality assessment, attribute reduction, fish detection, solving manufacturing cell design problem.
