Sommario/riassunto

This collection examines the extent to which foreign capital from conventional (OECD countries) and non-conventional (BRICS) sources has impacted economic development in Africa over the last two decades. It provides in-depth analyses of the nature, motives, and implications of this capital, and identifies drivers of contemporary rapid growth within and across African countries. Authored by leading experts, the book offers original insights for academics, policymakers, and practitioners studying the changes taking place in Africa as the continent strides more confidently toward integration with the global economy.
