Sommario/riassunto This book provides a detailed and up-to- date analysis of the current and near-future domestic economic situation in China based on the concept of "New Normal", which was first proposed by Chinese

President Xi Jinping and which is commonly used in discussions on

China's current economy. China's New Normal is the result of the growing pressures on domestic resources, environmental restrictions, and unstable international economic recovery and characterized by a moderate economic increase, a proper increase in commodity pricing, stabilizing new employment and optimizing economic structure. The book argues that while China focuses on stability and quality in macrocontrol and enhancing reform and innovation, many contradictions and problems in economic operations are gradually being solved, therefore optimizing the economic structure. The book explores many aspects of China's economic development under the "New Normal" while making analysis and policy suggestions for the present economic trends.
