

1. Record Nr.	UNINA9910255044303321
Autore	in 't Hout Karel
Titolo	Numerical Partial Differential Equations in Finance Explained : An Introduction to Computational Finance // by Karel in 't Hout
Pubbl/distr/stampa	London : , : Palgrave Macmillan UK : , : Imprint : Palgrave Macmillan, , 2017
ISBN	1-37-43569-0
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (XIV, 128 p. 42 illus.)
Collana	Financial Engineering Explained
Disciplina	650.01513
Soggetti	Financial engineering Financial Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Chapter1. Financial option valuation.-Chapter2. Partial differential equations -- Chapter3 Spatial discretization I -- Chapter4. Spatial discretization II -- Chapter5. Numerical study: space -- Chapter6. The Greeks -- Chapter7. Temporal discretization -- Chapter8. Numerical study: time -- Chapter9. Cash-or-nothing options -- Chapter10. Barrier options -- Chapter11. American-style options -- Chapter12. Merton model -- Chapter13. Two-asset options.
Sommario/riassunto	This book provides a first, basic introduction into the valuation of financial options via the numerical solution of partial differential equations (PDEs). It provides readers with an easily accessible text explaining main concepts, models, methods and results that arise in this approach. In keeping with the series style, emphasis is placed on intuition as opposed to full rigor, and a relatively basic understanding of mathematics is sufficient. The book provides a wealth of examples, and ample numerical experiments are given to illustrate the theory. The main focus is on one-dimensional financial PDEs, notably the Black-Scholes equation. The book concludes with a detailed discussion of the important step towards two-dimensional PDEs in finance.
