Sommario/riassunto

This book tackles the problem of the insufficient and expensive charging infrastructure in Germany. It assesses the lack of charging infrastructure for electric vehicles with regard to regulatory and competition law, as well as economic aspects. The legal solutions proposed here could ultimately serve to offer e-motorists around the country highly efficient and competitively priced charging options.

Sommario/riassunto

This two-volume set LNCS 1319 and 13320 constitutes the thoroughly refereed proceedings of the 13th International Conference on Digital Human Modeling and Applications in Health, Safety, Ergonomics and Risk Management, DHM 2022, which was held virtually as part of the 24rd HCI International Conference, HCII 2022, in June/July 2022. The total of 1271 papers and 275 poster papers included in the 39 HCII 2022 proceedings volumes was carefully reviewed and selected from 5487 submissions. DHM 2022 includes a total of 56 papers. The first volume focuses on topics related to ergonomic design, anthropometry, and human modeling, as well as collaboration, communication, and human behavior. The second volume focuses on topics related to task analysis, quality and safety in healthcare, as well as occupational health and operations management, and Digital Human Modeling in interactive product and service design.
