## Sommario/riassunto

This book will be available open access upon publication. Capital, Privilege, and Political Participation examines how privilege and people's perceptions of it relate to their involvement in politics. It treats people's stocks of economic, social and cultural capital as indicators of privilege as well as resources that help them engage with politics. It also argues that how people perceive privilege in society, their own lives and politics matters for their political participation. Using survey, interview and focus group evidence, the book shows that capital and perceptions of privilege do, indeed, relate to involvement in a host of political activities. Whilst political participation is a normal if not daily feature of many people's lives, having more economic and cultural capital is associated with being more politically active. Perceiving the role of privilege in society is also linked to higher levels of participation, whilst perceiving privilege in politics is unsurprisingly associated with being less politically active. Questions about how, if at all, capital and perceptions of privilege are causally related to political participation, but the book concludes that getting involved in politics is a distinguished activity. Efforts to tackle these inequalities in participation should, according to the people who participated in the research, centre on outreach activities by political institutions, more extensive and consistent citizenship education, and the active opening

up of politics to the population.

Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	This book discusses comprehensively the use of Flipped Classrooms in the context of legal education. The Flipped Classroom model implies that lecture modules are delivered online to provide more time for in-class interactivity. This book analyses the pedagogical viability, costs and other resource-related implications, technical aspects as well as the production and online distribution of Flipped Classrooms. It compares the Flipped Classroom concept with traditional law teaching methods and details its advantages and limitations. The findings are tested by way of a case study which serves as the basis for the development of comprehensive guidelines for the concept's practical implementation. As Flipped Classrooms have become a very hot topic across disciplines in recent years, this book offers a unique resource for law teachers, law school managers as well as researchers in the field of legal education. It is a must-have for anyone interested in innovative

law teaching methodologies.
