

1. Record Nr.	UNINA9910255268503321
Autore	Chan Hau Nung Annie
Titolo	Women in the Hong Kong Police Force : Organizational Culture, Gender and Colonial Policing // by Annie Hau-Nung Chan, Lawrence Ka-Ki Ho
Pubbl/distr/stampa	London : , : Palgrave Macmillan UK : , : Imprint : Palgrave Macmillan, , 2017
ISBN	9781349952816 1349952818
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (XI, 298 p.)
Collana	Palgrave Advances in Criminology and Criminal Justice in Asia, , 2946-2886
Disciplina	363.2082
Soggetti	Criminology Crime - Sociological aspects Sex Economics - Sociological aspects China - History Asia - Politics and government Crime Control and Security Crime and Society Gender Studies Economic Sociology History of China Asian Politics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Sommario/riassunto	This book examines the development of women in the Hong Kong Police Force (HKP) over the past 68 years, beginning from the early colonial years when calls to include women in law enforcement first emerged, to the recruitment of the first female sub-inspector in 1949, and through to the current situation where policewomen constitute 15% of the total HKP establishment. What accounts for these developments

and what do they tell us about organisational culture, gender and colonial policing? This interdisciplinary work is relevant to fields including women's studies, gender studies, policing studies, criminology, colonial history, sociology, and organisational studies, and will appeal to academics, students and lay readers interested in the development of women in policing.

2. Record Nr.	UNINA9910409690303321
Titolo	Accelerated Plant Breeding, Volume 1 : Cereal Crops // edited by Satbir Singh Gosal, Shabir Hussain Wani
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-41866-9
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (455 pages) : illustrations
Disciplina	631.52 633.1043
Soggetti	Plant biotechnology Plant genetics Agriculture Nutrition Plant Biotechnology Plant Genetics Genètica vegetal Agricultura Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Foreword -- Preface -- Accelerated Breeding of Plants: Methods and Applications -- Speed Breeding: Methods and Applications -- Genomic Selection in Cereal Crops: Methods and Applications -- Data Driven Decisions for Accelerated Plant Breeding -- Advanced Quantitative Genetics Technologies for Accelerating Plant Breeding -- Haploid

Production Technology: Fasten Wheat Breeding to Meet Future Food Security -- Recent Advances in Chromosome Elimination Mediated Doubled Haploidy Breeding: Focus on Speed Breeding in Bread and Durum Wheats -- Acceleration of the Breeding Program for Winter Wheat -- Genomics, Biotechnology and Plant Breeding Towards Improving Rice Production -- High Frequency Androgenic Green Plant Regeneration in Indica Rice for Accelerated Breeding -- Doubled Haploid Technology for Rapid and Efficient Maize Breeding -- Bio-fortification of Maize using Accelerated Breeding Tools -- Efficient Barley Breeding -- Finger Millet (*Eleusine coracana* L. Gaertn.) Genetics and Breeding for Rapid Genetic Gains -- Breeding Advancements in Barnyard Millet -- Sorghum Improvement Through Efficient Breeding Technologies -- Index.

Sommario/riassunto

Plant improvement has shifted its focus from yield, quality and disease resistance to factors that will enhance commercial export, such as early maturity, shelf life and better processing quality. Conventional plant breeding methods aiming at the improvement of a self-pollinating crop, such as wheat, usually take 10-12 years to develop and release of the new variety. During the past 10 years, significant advances have been made and accelerated methods have been developed for precision breeding and early release of crop varieties. This work summarizes concepts dealing with germplasm enhancement and development of improved varieties based on innovative methodologies that include doubled haploidy, marker assisted selection, marker assisted background selection, genetic mapping, genomic selection, high-throughput genotyping, high-throughput phenotyping, mutation breeding, reverse breeding, transgenic breeding, shuttle breeding, speed breeding, low cost high-throughput field phenotyping, etc. It is an important reference with special focus on accelerated development of improved crop varieties.
