

1. Record Nr.	UNINA9910257399203321
Autore	Kopietz Peter <1961->
Titolo	Bosonization of interacting fermions in arbitrary dimensions / / Peter Kopietz
Pubbl/distr/stampa	Berlin : , : Springer, , [1997] Â©1997
ISBN	3-540-68495-6
Edizione	[1st ed. 1997.]
Descrizione fisica	1 online resource (XII, 259 p. 3 illus.)
Collana	Lecture notes in physics. New series m, Monographs
Disciplina	530.143
Soggetti	Interacting boson-fermion models Many-body problem Fermions
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Development of the formalism -- Fermions and the Fermi surface -- Hubbard-Stratonovich transformations -- Bosonization of the Hamiltonian and the density-density correlation function -- The single-particle Green's function -- Applications to physical systems -- Singular interactions ($f(q) \propto q ^\alpha$) -- Quasi-one-dimensional metals -- Electron-phonon interactions -- Fermions in a stochastic medium -- Transverse gauge fields.
Sommario/riassunto	The author presents in detail a new non-perturbative approach to the fermionic many-body problem, improving the bosonization technique and generalizing it to dimensions $d>1$ via functional integration and Hubbard-Stratonovich transformations. In Part I he clearly illustrates the approximations and limitations inherent in higher-dimensional bosonization and derives the precise relation with diagrammatic perturbation theory. He shows how the non-linear terms in the energy dispersion can be systematically included into bosonization in arbitrary d , so that in $d>1$ the curvature of the Fermi surface can be taken into account. Part II gives applications to problems of physical interest, such as coupled metallic chains, electron-phonon interactions, disordered electrons, and electrons coupled to transverse gauge fields. The book addresses researchers and graduate students in theoretical condensed

matter physics.
