

1. Record Nr.	UNINA9910257443503321
Autore	Kubyshin Yura A
Titolo	Dimensional Reduction of Gauge Theories, Spontaneous Compactification and Model Building [[electronic resource] /] / by Yura A. Kubyshin, Jose M. Mourao, Gerd Rudolph, Igor P. Volobujev
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 1989
ISBN	3-540-46860-9
Edizione	[1st ed. 1989.]
Descrizione fisica	1 online resource (X, 80 p.)
Collana	Lecture Notes in Physics, , 0075-8450 ; ; 349
Disciplina	530.1/435
Soggetti	Quantum physics Quantum computers Spintronics Elementary particles (Physics) Quantum field theory Gravitation Quantum Physics Quantum Information Technology, Spintronics Elementary Particles, Quantum Field Theory Classical and Quantum Gravitation, Relativity Theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Dimensional reduction of pure Yang-mills theories -- Dimensional reduction of gravity and spontaneous compactification -- Dimensional reduction of matter fields and model building.
Sommario/riassunto	This monograph presents in detail the reduction method for studying the unification of fundamental actions. The mathematical (differential geometrical) methods make extensive use of Lie Groups and the concept of homogeneous spaces. The main topic of the book is the dimensional reduction of pure Yang-Mills theories. A rather complete analysis of the structure of the scalar field potential is given and a general procedure for solving the equations of spontaneous compactification within Einstein-Yang-Mills systems is presented. The

authors also discuss gravity and theories with fermions included and they review attempts to construct realistic models. The book presents the basic ideas and the calculations in detail and should be of interest to researchers and graduate students in mathematical physics.
