

1. Record Nr.	UNINA9910260649903321
Autore	Hand D. J.
Titolo	Principles of data mining // David Hand, Heikki Mannila, Padhraic Smyth
Pubbl/distr/stampa	Cambridge, Massachusetts : , : MIT Press, , 2001 [Piscataway, New Jersey] : , : IEEE Xplore, , [2001]
ISBN	0-262-30408-2 0-262-25630-4 1-282-09636-2 1-4237-3132-8
Descrizione fisica	1 PDF (xxxii, 546 pages)
Collana	Adaptive computation and machine learning series
Altri autori (Persone)	MannilaHeikki SmythPadhraic
Disciplina	006.312
Soggetti	Data mining
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"A Bradford book."
Nota di bibliografia	Includes bibliographical references (p. [491]-524) and index.
Sommario/riassunto	The growing interest in data mining is motivated by a common problem across disciplines: how does one store, access, model, and ultimately describe and understand very large data sets? Historically, different aspects of data mining have been addressed independently by different disciplines. This is the first truly interdisciplinary text on data mining, blending the contributions of information science, computer science, and statistics. The book consists of three sections. The first, foundations, provides a tutorial overview of the principles underlying data mining algorithms and their application. The presentation emphasizes intuition rather than rigor. The second section, data mining algorithms, shows how algorithms are constructed to solve specific problems in a principled manner. The algorithms covered include trees and rules for classification and regression, association rules, belief networks, classical statistical models, nonlinear models such as neural networks, and local "memory-based" models. The third section shows how all of the preceding analysis fits together when applied to real-world data mining problems. Topics include the role of metadata, how

to handle missing data, and data preprocessing.
