|    | Sommario/riassunto      | Over the last three decades, a significant amount of research has<br>sought to relate educational institutions, policies, practices and reforms<br>to social structures and agencies. A number of models have been<br>developed that have become the basis for attempting to understand the<br>complex relation between education and society. At the same time,<br>national and international bodies tasked with improving educational<br>performances seem to be writing in a void, in that there is no rigorous<br>theory guiding their work, and their documents exhibit few references<br>to groups, institutions and forces that can impede or promote their<br>programmes and projects. As a result, the recommendations these<br>bodies provide to their clients display little to no comprehension of<br>how and under what conditions the recommendations can be put into<br>effect. The Education System in Mexico directly addresses this problem.<br>By combining abstract insights with the practicalities of educational<br>reforms, policies, practices and their social antecedents, it offers a long<br>overdue reflection of the history, effects and significance of the |

| Mexican educationa   | l system, as well as presenting a more cogent       |
|----------------------|---|
| understanding of the | e relationship between educational institutions and |
| social forces in Mex | ico and around the world.                           |
