

1. Record Nr.	UNINA9910270889203321
Autore	Quevauviller Ph
Titolo	Management of the effects of coastal storms : policy, scientific and historical perspectives // Philippe Quevauviller, Paolo Ciavola, Emmanuel Garnier
Pubbl/distr/stampa	London, [England] ; ; Hoboken, New Jersey : , : ISTE : , : Wiley, , 2017 ©2017
ISBN	1-119-17901-7 1-119-17902-5 1-119-11610-4
Descrizione fisica	1 online resource (193 pages)
Collana	Focus Series.
Disciplina	333.917
Soggetti	Coastal zone management Environmental protection - Planning
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface -- Coastal storms and flooding : regulatory framework and science--policy interactions -- Techniques for the assessment of coastal storm risk -- Xynthia, February 2010 : autopsy of a foreseeable catastrophe -- Conclusion.
Sommario/riassunto	"A large part of the world's coastlines consists of sandy beaches and dunes that may undergo dramatic changes during storms. Extreme storm events in some cases dominate the erosion history of the coastline and may have dramatic impacts on densely populated coastal areas. Policy, research and historical background are essential elements that need to be interconnected for effective coastal planning and management. This book discusses this framework, with Chapter 1 providing an insight into policy settings and science-policy interactions in the area of coastal risks related to storms and flooding, and integrated coastal zone management. This is followed by a review of the current understanding of the processes generating extreme coastal events, the morphological evolution of coastlines during and after the events, and the methods for monitoring the process as it occurs or for post-event appraisal. The final chapter discusses the importance of

historical approaches regarding coastal threats, taking the Xynthia storm as an example."--Page 4 of cover.
