

1. Record Nr.	UNINA9910279756003321
Autore	Hytönen Tuomas
Titolo	Analysis in Banach Spaces [[electronic resource]] : Volume II: Probabilistic Methods and Operator Theory // by Tuomas Hytönen, Jan van Neerven, Mark Veraar, Lutz Weis
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2017
ISBN	3-319-69808-7
Edizione	[1st ed. 2017.]
Descrizione fisica	1 online resource (616 pages) : illustrations, tables
Collana	Ergebnisse der Mathematik und ihrer Grenzgebiete. 3. Folge / A Series of Modern Surveys in Mathematics, , 0071-1136 ; ; 67
Disciplina	515.732
Soggetti	Functional analysis Operator theory Fourier analysis Partial differential equations Probabilities Functional Analysis Operator Theory Fourier Analysis Partial Differential Equations Probability Theory and Stochastic Processes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	6.Random sums.-7.Type, cotype, and related properties -- 8.R-boundedness -- 9.Square functions and radonifying operators -- 11. The H1-functional calculus -- P.Open problems -- E.Probability theory -- F Banach lattices -- G Semigroups of linear operators -- H. Holomorphic functions on the strip -- I.Muckenhoupt weights -- References -- Index.
Sommario/riassunto	This second volume of Analysis in Banach Spaces, Probabilistic Methods and Operator Theory, is the successor to Volume I, Martingales and Littlewood-Paley Theory. It presents a thorough study of the fundamental randomisation techniques and the operator-theoretic aspects of the theory. The first two chapters address the relevant

classical background from the theory of Banach spaces, including notions like type, cotype, K-convexity and contraction principles. In turn, the next two chapters provide a detailed treatment of the theory of R-boundedness and Banach space valued square functions developed over the last 20 years. In the last chapter, this content is applied to develop the holomorphic functional calculus of sectorial and bi-sectorial operators in Banach spaces. Given its breadth of coverage, this book will be an invaluable reference to graduate students and researchers interested in functional analysis, harmonic analysis, spectral theory, stochastic analysis, and the operator-theoretic approach to deterministic and stochastic evolution equations. .
