Descrizione fisica	1 online resource (1 p.)
Soggetti	Law
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This volume brings together the papers of the 15th Göttingen Workshop on Family Law, which was held on the 20th October 2017 in cooperation with the joint project "Power and Powerlessness of Maternity". All in all eight contributions shed light on the currently controversial discussion about the so-called shared residence model from different perspectives: In addition to the constitutional basics, comparative and interdisciplinary approaches, all follow-up questions in maintenance, social and tax law are also dealt with. It becomes very clear that the deficits in the relevant laws can only be partially compensated by judiciary law and that the existing incoherencies can only be remedied rudimentary. In addition, well-founded proposals for reform are also presented.

3. Record Nr.	UNINA9910557526303321
Autore	Diaconu Camelia
Titolo	Interdisciplinary Medicine
Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2021
Descrizione fisica	1 online resource (282 p.)
Soggetti	Medicine
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Dear Colleagues, The rapidly changing field of medicine and healthcare is increasingly adopting scientific and technological innovations, making interdisciplinary collaborations especially important. In this context, medical disciplines are becoming increasingly interlinked with other specialities and fields. A more interdisciplinary approach to the patient is needed, especially for complex patients with numerous comorbidities, most of whom are usually elderly and fragile. The greatest challenges to human health lie at the intersection of different medical fields. An interdisciplinary medical team is increasingly necessary with the rapid expansion of medical knowledge. Given the importance of interdisciplinarity in the field of medicine and research, the international journal Medicina-Lithuania has launched this Special Issue. The Special Issue has attracted the interest of different groups of researchers, and very interesting articles from different countries. Reviews or original articles dealing with interdisciplinary medical problems, as well as articles providing an up-to-date overview of the diagnostic protocols and treatments for patients with multiple comorbidities have been published. I thank all the authors for sharing their research and wish all readers a fruitful and stimulating read! Assoc. Prof. Dr. Camelia DIACONU Guest Editor</p>
