| Sommario/riassunto      | This book constitutes the refereed proceedings of the 6th International Symposium on Advances in Signal Processing and Intelligent Recognition Systems, SIRS 2020, held in Chennai, India, in October 2020. Due to the COVID-19 pandemic the conference was held online. The 22 revised full papers and 5 revised short papers presented were carefully reviewed and selected from 50 submissions. The papers cover wide research fields including information retrieval, human-computer interaction (HCI), information extraction, speech recognition. |

| Sommario/riassunto      | Desde hace dos o tres décadas las identidades colectivas han vuelto a surgir, como un eje privilegiado de movilización entre distintos tipos de colectivos y grupos sociales indígenas, afrodescendientes, grupos religiosos, de género etcétera. ¿Por qué y cómo se activa dicho registro identitario, en la ciudad y en el campo, en muchos países de América Latina y del mundo? Entre 2002 y 2006, un equipo internacional de investigadoras e investigadores de México, Colombia y Francia se dio a la tarea de confrontar experiencias e interpretaciones teóricas, con el fin de construir una propuesta basada en la comparación. Fruto del proyecto de investigación Idymov, Identidades y movilidades: las sociedades regionales en los nuevos contextos políticos y migratorios. Una comparación entre México y Colombia, este libro es el resultado de una reflexión construida en el diálogo y a veces en la confrontación entre varios enfoques y desde varias loci de enunciación y diversos posicionamientos: empíricos, teóricos, académicos, epistemológicos y |

éticos.

| Sommario/riassunto      | <p>This book is based on a Special Issue of the journal LAND that draws together a collection of 11 diverse articles at the nexus of climate change, landscapes, and livelihoods in rural Africa; all explore the links between livelihood and landscape change, including shifts in farming practices and natural resource use and management. The articles, which are all place-based case studies across nine African countries, cover three not necessarily mutually exclusive thematic areas, namely: smallholder farming livelihoods under new climate risk (five articles); long-term dynamics of livelihoods and landscape change and future trajectories (two articles); and natural resource management and governance under a changing climate, spanning forests, woodlands, and rangelands (four articles). The commonalities, key messages, and research gaps across the 11 articles are presented in a synthesis article. All the case studies pointed to the need for an integrated and in-depth understanding of the multiple drivers of landscape and livelihood change and how these interact with local histories, knowledge systems,</p> |

cultures, complexities, and lived realities. Moreover, where there are interventions (such as new governance systems, REDD+ or climate smart agriculture), it is critical to interrogate what is required to ensure a fair and equitable distribution of emerging benefits.
