This book presents in a concise and accessible way, as well as in a common setting, various tools and methods arising from spectral theory, ergodic theory and stochastic processes theory, which form the basis of and contribute interactively a great deal to the current research on almost everywhere convergence problems. The text is divided into four parts. Part I is devoted to spectral results such as von Neumann's theorem, spectral regularizations inequalities and their link with square functions and entropy numbers of ergodic averages. The representation of a weakly stationary process as Fourier transform of some random orthogonal measure, and a study of Gaposhkin's spectral criterion conclude this part. Classical results such as mixing in dynamical systems, Birkhoff's pointwise theorem, dominated ergodic theorems, oscillations functions of ergodic averages, transference principle, Wiener-Wintner theorem, Banach principle, continuity principle, Bourgain's entropy criteria, Burton-Denker's central limit theorem are covered in part II. The metric entropy method and the majorizing measure method, including a succinct study of Gaussian processes, are treated in part III, with applications to suprema of random polynomials. Part IV contains a study of Riemann sums and of the convergence properties of the system  $\{f(nkx), k \geq 1\}$ , as well as a probabilistic approach concerning divisors with applications. Researchers working in dynamical systems and at the crossroads of spectral theory, ergodic theory and stochastic processes will find the tools, methods and results presented in this book of great interest. It is written in a style accessible to graduate students throughout.

Soggetti	Business ethics Business Ethics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Prologue -- Religion and the Market: A Tour d'Horizon -- Vices and Virtues Revisited -- From Static to Dynamic -- Between Open and Closed -- Conclusion -- Epilogue.
Sommario/riassunto	This book aims to go beyond merely confrontational or complementary treatments of the relationship between market participation and business ethics. Reviewing the attitudes towards the market embedded in religious ethics and scholars, it explores the symbiotic relationship between the economy, ethics and morals. Moving the discussion beyond a static and traditional economy envisaged by scripture, it explores the impact of an evolving and globalised economy based on the value systems of moral philosophy and religious ethics. The Author aims to expand the conventional view of business ethics, encouraging readers to interpret markets and morality as intertwined concepts, and use them to inform further research. .
