

1. Record Nr.	UNINA9910298278203321
Autore	Giddings Lesley-Ann
Titolo	Bioactive Compounds from Extremophiles : Genomic Studies, Biosynthetic Gene Clusters, and New Dereplication Methods / / by Lesley-Ann Giddings, David J. Newman
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-14836-2
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (63 p.)
Collana	Extremophilic Bacteria, , 2570-4648
Disciplina	578.758
Soggetti	Microbiology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Activating the expression of natural product biosynthetic gene clusters -- Bioprospecting metagenomes for new bioactive agents -- Dereplication methods for identifying new secondary metabolites from extremophiles -- Summary and concluding remarks.
Sommario/riassunto	This SpringerBrief sheds new light on bioactive materials from extremophiles with the focus on the biosynthesis processes and related genomics. It deals with all aspects of the chemical compounds produced by organisms living under extreme conditions that may have potential as drugs or lead to novel drugs for human use.
