

1. Record Nr.	UNINA9910298286203321
Titolo	Body Metabolism and Exercise // edited by Mieczyslaw Pokorski
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-10250-8
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (75 p.)
Collana	Neuroscience and Respiration ; ; 840
Disciplina	612.39
Soggetti	Human physiology Medicine Health promotion Metabolism - Disorders Respiratory organs—Diseases Human Physiology Medicine/Public Health, general Health Promotion and Disease Prevention Metabolic Diseases Pneumology/Respiratory System
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Body Composition in Heavy Smokers: Comparison of Segmental Bioelectrical Impedance Analysis and Dual-Energy X-ray Absorptiometry -- Metabolic and immunological consequences of vitamin D deficiency in obese children -- Markers of Bone Metabolism in Children with Nephrotic Syndrome Treated with Corticosteroids -- Endurance Training and the Risk of Bronchial Asthma in Female Cross-Country Skiers -- Effects of Inspiratory Muscle Training on Resistance to Fatigue of Respiratory Muscles During Exhaustive Exercise -- Nutritional Status in Chronic Obstructive Pulmonary Disease and Systemic Sclerosis: Two Systemic Diseases Involving the Respiratory System -- Gradual versus Continuous Increase of Load in Ergometric Tests: Are the Results Comparable? -- Evaluation of Volumetric Changes in Differential Diagnosis of Brain Atrophy and Active

Hydrocephalus.

Sommario/riassunto

The dynamics of body metabolism are changed in the disease process and interact with physical activity. The alteration of metabolism and its consequences raise the need for simple and reliable methods for assessment of body composition. The chapters aim to investigate various interacting components converging on metabolic changes in lung and muscle tissues taking into consideration the drug effects. The effects of exercise and nutritional status are dealt with at a great extent.
