1. Record Nr.   UNINA9910298288803321

   Titolo   Biological Basis of Alcohol-Induced Cancer / / edited by Vasilis
                       Vasiliou, Samir Zakhari, Helmut K. Seitz, Jan B. Hoek

   Pubbl/distr/stampa Cham : , : Springer International Publishing : , : Imprint : Springer, ,
                       2015

   ISBN   3-319-09614-1

   Edizione   [1st ed. 2015.]

   Descrizione fisica 1 online resource (445 p.)

   Collana   Advances in Experimental Medicine and Biology, , 2214-8019 ; ; 815

   Disciplina   616.994071

   Soggetti   Cancer
                       Clinical biochemistry
                       Cytology
                       Stem cells
                       Cancer Biology
                       Medical Biochemistry
                       Cell Biology
                       Stem Cell Biology

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Note generali   Description based upon print version of record.

   Nota di bibliografia   Includes bibliographical references at the end of each chapters and
                       index.

   Nota di contenuto   Introduction -- Alcohol and breast cancer: Reconciling epidemiological
                       and molecular data -- Genetic-epidemiological evidence for the role of
                       acetaldehyde in cancers related to alcohol drinking -- Alcohol and
                       Cancer: an Overview With special Emphasis on the Role of Acetaldehyde
                       and Cytochrome P-4502E1 -- Implications of acetaldehyde-derived
                       DNA adducts for understanding alcohol related carcinogenesis -- The
                       role of iron in alcohol-mediated hepatocarcinogenesis -- Alcoholic
                       Cirrhosis and Hepatocellular Carcinoma -- TLR4-dependent tumor-
                       initiating stem cell-like cells (TICs) in alcohol-associated hepatocellular
                       carcinogenesis -- Synergistic Toxic Interactions Between CYP2E1,
                       LPS/TNF and JNK/p38 MAP Kinase and their Implications in Alcohol-
                       induced Liver Injury -- Understanding the tumor suppressor PTEN in
                       chronic alcoholism and hepatocellular carcinoma -- Alcohol
                       consumption, Wnt/b-catenin signaling and hepatocarcinogensis --

Alcohol and HCV: Implications for Liver Cancer -- Application ofMass Spectrometry-based Metabolomics in Identification of Early Noninvasive Biomarkers of Alcohol-Induced Liver Disease Using Mouse Model -- Alcohol Metabolism by Oral Streptococci and Interaction with Human Papillomavirus Leads to Malignant Transformation of Oral Keratinocytes -- Genetic polymorphisms of alcohol dehydrogense-1B and aldehyde dehydrogenase-2, alcohol flushing, mean corpuscular volume, and aerodigestive tract neoplasia in Japanese drinkers -- Acetaldehyde and Retinaldehyde-Metabolizing Enzymes in Colon and Pancreatic cancers -- Alcohol, Carcinoembryonic Antigen Processing and Colorectal Liver Metastases -- Alcohol Consumption and Antitumor Immunity: Dynamic Changes from Activation to Accelerated Deterioration of the Immune System -- A Perspective on Chemoprevention by Resveratrol in Head and Neck Squamous Cell Carcinoma -- The effects of alcohol and aldehyde dehydrogenases on disorders of hematopoiesis -- The effect of alcohol on sirt1 expression and function in animal and human models of hepatocellular carcinoma (HCC) -- Transgenic Mouse Models for Alcohol Metabolism, Toxicity and Cancer -- Fetal alcohol exposure increases susceptibility to carcinogenesis and promotes tumor progression in prostate gland -- Fetal Alcohol Exposure and Mammary Tumorigenesis in Offspring: Role of the Estrogen and Insulin-like Growth Factor Systems.

| Sommario/riassunto | This proceedings volume will contain chapters based upon the presentation of the 2nd International Conference on Alcohol and Cancer in Colorado, 2013. The various topics explore the affects of alcohol on: liver and breast cancer, cell signaling and cancer, stem cells, biomarkers and metabolomics, aerodigestive cancers, cancer and the immune system, and more. In the recent years, a significant amount of research has emerged connecting the link between alcohol and cancer. The field has rapidly advanced, especially since the complex connection between alcohol and cancer has several unique sub areas that are being investigated and this volume gives a comprehensive overview of these advancements. |
