

1. Record Nr.	UNINA9910298293503321
Autore	Panyutina Aleksandra A
Titolo	Flight of Mammals: From Terrestrial Limbs to Wings // by Aleksandra A. Panyutina, Leonid P. Korzun, Alexander N. Kuznetsov
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-08756-8
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (321 p.)
Disciplina	576.8
Soggetti	Evolution (Biology) Physiology Anatomy Animal ecology Vertebrates Evolutionary Biology Animal Physiology Animal Anatomy / Morphology / Histology Animal Ecology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Chapter 1: Forelimb Morphology of Tree Shrews -- Chapter 2: Forelimb Morphology of Colugos -- Chapter 3: Forelimb Morphology of Bats -- Chapter 4: Functional Analysis of the Locomotor Apparatus of Colugos -- Chapter 5: Functional Analysis of the Locomotor Apparatus of Bats -- Chapter 6: Comparative Morphofunctional Analysis -- Chapter 7: Evolutionary Scenario for the Establishment of Flapping Flight.
Sommario/riassunto	The evolutionary acquisition of flapping flight in mammals remains one of the unresolved questions of biology. Currently, no consensus as to the morphofunctional steps through which mammals passed to gain the ability to fly by flapping wings has been reached. Flight of Mammals: From Terrestrial Limbs to Wings is the result of several years of research aimed to fill this gap in the literature. Its conclusions are based on original data obtained by dissections of musculoskeletal

system of a number of species and on a biomechanical analysis of these data. In addition to a thorough discussion of anatomy and the means through which mammals acquired flapping flight, more than two-hundred detailed line drawings and images provide a picture of the mechanisms of flight in bats and colugos unavailable in any other source. The book is of interest to a wide range of biologists, not only to those who study bats. The methods and approaches used by the authors can be also applied to other groups of mammals in order to create morphofunctional scenarios of their evolution. Authors Aleksandra A. Panyutina, Leonid P. Korzun, and Alexander N. Kuznetsov are all followers of the scientific school of functional morphology developed at Department of Vertebrate Zoology, Faculty of Biology, Lomonosov Moscow State University, Moscow, Russia.
