

1. Record Nr.	UNINA9910298311803321
Titolo	MicroRNA in Development and in the Progression of Cancer // edited by Shree Ram Singh, Pranela Rameshwar
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 2014
ISBN	1-4899-8065-2
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (410 p.)
Disciplina	610 611.01816 614.5999 616.9041
Soggetti	Cancer research Gene expression Medical microbiology Medicine Cancer Research Gene Expression Medical Microbiology Biomedicine, general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface -- miRNA biogenesis and function -- miRNAs in cancer progression -- MicroRNA, DNA repair and cancer -- Role of microRNAs in stem cells regulation and tumorigenesis in Drosophila -- MicroRNAs in stem cells and cancer stem cells -- MicroRNAs in epithelial mesenchymal transition and breast cancer progression -- MicroRNAs in the development and progression of breast cancer -- The role of microRNAs in hematopoietic stem cells and leukemia development -- MiRNA and chronic lymphocytic leukemia -- The role of miRNAs in the development of normal pancreas and pancreatic cancer, and their roles in tumor progression -- Epigenetic regulation of microRNA genes in colorectal cancer -- MicroRNAs in the development and progression of kidney cancer -- MicroRNAs in the development and progression of

skin cancer -- MicroRNAs in the Development and Progression of Prostate Cancer -- MicroRNAs in development and progression of ovarian cancer -- MicroRNA and Cancer Drug Resistance -- Microvesicular Transfer of microRNA in Tumor Microenvironment -- MicroRNA cancer therapeutics and the challenge of drug delivery -- MicroRNA and Drug Delivery -- Index.

Sommario/riassunto

MicroRNAs (miRNAs) are small 22-nucleotides long non-coding RNAs that regulate the gene expression through translational repression and mRNA degradation in varieties of species. miRNAs play regulatory role in several fundamental biological processes from normal development to regulation of stem cells, cancer stem cells and various human diseases including cancer. miRNAs can be used as potential biomarkers for disease diagnosis and have been considered potential therapeutic strategies in cancer treatment. This is a timely and specialized book providing the current understanding of miRNAs and their potential application in cancer diagnosis, prognosis, and therapeutic strategies in cancer treatment. This book will be a valuable source of information for the scientists in the field of cancer research as well as undergraduate and graduate students who want to pursue their research careers in cancer biology.
