Nota di contenuto	The development of First-Time-Right Procurement -- Implementing First-Time-Right in the source processes -- Replacing purchasing savings with First-Time-Right Procurement -- Measuring First-Time-Right Procurement.
Sommario/riassunto	Based on more than 10 years of practical experience in the field of supply chain management, Oliver Münch indicates that in favor of sustainability within the supply chain the paradox purchasing savings can and should be substituted with the approach of the First-Time-Right Procurement. This dissertation subjects the monetary measurement of purchasing savings to a critical examination and questions whether it still applies. It indicates that monetary purchasing savings exert a negative impact on sustainable company success. In order to achieve a long-term sustainable success, it is proposed that

the monetary measurement of purchasing savings can be replaced by measuring process times within the procurement organization. Contents The development of First-Time-Right Procurement Implementing First-Time-Right in the source processes Replacing purchasing savings with First-Time-Right Procurement Measuring First-Time-Right Procurement Target Groups Students and researchers in the fields of business administration and supply chain management Executives who are concerned with procurement/ purchasing or supply chain management The Author Oliver Münch obtained his doctorate degree at the Cyprus International University under the supervision of Assist. Prof. Dr. Ali Öztüren. He currently works as the head of supply chain engineering in a German defense company.
