### Sommario/riassunto

Though considerable research literature is now available on China–India relations, most of it still follows a conventional narrative, viewing the relationship through the narrow conflictual prism limited to South Asia than in the new, larger perspective, especially in the context of emerging East Asian dynamics. This book offers comprehensive analyses of some of these issues in papers addressing two broad themes. One, significant trends in the relationship between China and India on a range of issues, including economic development models, their military strategies, and the boundary dispute; and two, how others are responding to the rise of India and China and their impact on East Asia. Together, the chapters constitute a comprehensive study on both China–India relations and their concurrent rise, including a variety of perspectives and methodologies. Written by some of the top experts on the subject from India, China, Japan, and Taiwan and covering a broad range of issues, the book will generate considerable interest in understanding this relatively neglected dimension of today's East Asia.
