

1. Record Nr.	UNINA9910298519103321
Autore	Puu Tõnu
Titolo	Arts, Sciences, and Economics : A Historical Safari // by Tõnu Puu
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2015
ISBN	3-662-44130-6
Edizione	[2nd ed. 2015.]
Descrizione fisica	1 online resource (210 p.)
Disciplina	330 363.69 501 519 621 700
Soggetti	Economics Management science Culture—Economic aspects Cultural heritage Arts Mathematics Social sciences Statistical physics Economics, general Cultural Economics Cultural Heritage Mathematics in the Humanities and Social Sciences Applications of Nonlinear Dynamics and Chaos Theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Culture and Civilization -- Public Goods -- Patronage -- Changing Attitudes -- Evolution in Science -- Perfection in Art -- Modelling Evolution Through Structural Change.
Sommario/riassunto	This book deals with the economic aspects of changing attitudes in arts

and sciences. The effects of the public good character of culture, along with the very long production period and lifetime for its products, are emphasized, since both contribute to the failure of normal market solutions. Embodiment of ideas, and the consequences of modern reproduction technology for protection of property rights are closely examined. The evolution within arts and sciences, which often seems to return to previously scrapped ideals, is illustrated by detailed case studies, in which the importance of changing tastes, rather than progress proper, is emphasized. The author attempts an understanding for this using Darwinian evolution in combination with modern mathematical complexity theory, expressed in terms accessible to the general reader. The second edition is extended and updated especially as regards the illustration material. "Professor Puu (...) introduces a fourth approach [to cultural economics]. (...) working it like a triangle, Arts, Sciences and Economics is, in a sense, inductive in nature. An observation made in one of the arts or the natural & engineering sciences (henceforth 'sciences') or economics is extended to cover the other two points of the triangle. The temporal plane of this triangle covers the pre-Renaissance to the 21st century with a special and loving emphasis on the Baroque.(...) Professor Puu's method reminds me of Pascal's Pensées (...), it also reminds me of Goethe (...) Unlike Goethe, however, the 'certain order' achieved by Professor Puu is mathematical rather than intuitive or aesthetic in nature. Underpinning the text is the correlation between Arts, Sciences and Economics through mathematics. And mathematics covers the waterfront from probability to chaos theory (...) This underpinning does, however, reveal Professor Puu as having a very well developed mathematical mind (...). Similarly, his cultural and historical erudition cannot be faulted but rather must be praised. The text is rich in example. (...) This book is not a narrative with a beginning, middle and end. It is Professor Puu's Pensées. (...) Calculatory rationalism is not the only tool of economics. Arguably, this is one implication of the term 'knowledge-based economy'. To such an economy, however, Professor Puu has made a most valuable and fascinating contribution."(...) Harry Hillman Chartrand, Book Review in Journal of Cultural Economics, vol. 31, number 1, 2007.
