1.	Record Nr.	UNINA9910298537003321
	Titolo	Enterprise Content Management in Information Systems Research : Foundations, Methods and Cases / / edited by Jan vom Brocke, Alexander Simons
	Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2014
	ISBN	3-642-39715-8
	Edizione	[1st ed. 2014.]
	Descrizione fisica	1 online resource (287 p.)
	Collana	Progress in IS, , 2196-8705
	Disciplina	005.7 658.54
	Soggetti	Information technology Business—Data processing Application software Information storage and retrieval IT in Business Information Systems Applications (incl. Internet) Information Storage and Retrieval
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references.
	Nota di contenuto	Part A: Foundation and Trends -- Part B: Methods and Tools -- Part C: Examples and Cases.
	Sommario/riassunto	"Enterprise Content Management in Information Systems Research – Foundations, Methods and Cases" collects ECM research from the academic discipline of Information Systems and related fields to support academics and practitioners who are interested in understanding the design, use and impact of ECM systems. It also provides a valuable resource for students and lecturers in the field. The book consolidates our current knowledge on how today's organizations can manage their digital information assets. The business challenges related to organizational information management include reducing search times, maintaining information quality, and complying with reporting obligations and standards. Many of these challenges are well-known in information management, but because of the vast quantities

of information being generated today, they are more difficult to deal with than ever. Many companies use the term "ECM" to refer to the management of all forms of information, especially unstructured information. While ECM systems promise to increase and maintain information quality, to streamline content-related business processes, and to track the lifecycle of information, their implementation poses several questions and challenges: Which content objects should be put under the control of the ECM system? Which processes are affected by the implementation? How should outdated technology be replaced? Research is challenged to support practitioners in answering these questions.
