

1. Record Nr.	UNINA9910298584603321
Autore	Ferraz de Paiva Raphael Enoque
Titolo	Gold(I,III) Complexes Designed for Selective Targeting and Inhibition of Zinc Finger Proteins [[electronic resource] /] / by Raphael Enoque Ferraz de Paiva
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-030-00853-3
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (184 pages)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	571.845
Soggetti	Inorganic chemistry Organometallic chemistry Proteins Mass spectrometry Bioorganic chemistry Immunology Inorganic Chemistry Organometallic Chemistry Protein-Ligand Interactions Mass Spectrometry Bioorganic Chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Au(I)-phosphine series design -- Probing the Protein: Ion Mobility Spectrometry -- Probing Gold: X-ray Absorption Spectroscopy -- Probing Cells: Cytotoxicity Evaluation -- Au(III) series with k ² C,N and k ² N,N' ligands -- "Dual Probe" X-ray Absorption Spectroscopy.
Sommario/riassunto	This book examines Au (I, III) complexes that selectively attack and inhibit zinc finger proteins (ZnFs) for potential therapeutic use. The author explores gold(I)-phosphine, gold(III) complexes with N [^] N and C [^] N donors as inhibitors of the HIV-1 nucleocapsid protein (NCp7), in comparison to the human transcription factor Sp1. To determine the coordination sphere of the gold adducts formed by interaction with

ZnFs, two innovative approaches are used, based on Travelling-Wave Ion Mobility coupled with Mass Spectrometry (TWIM-MS), and X-ray Absorption Spectroscopy. Both approaches are proven to yield valuable structural information regarding the coordination sphere of gold in the adducts. In addition, the organometallic compound [Au (bnpy)Cl₂] is evaluated. The system is shown to be capable of inhibiting ZnFs by means of C–S coupling.
