

1. Record Nr.	UNINA9910298631603321
Titolo	SialoGlyco Chemistry and Biology II : Tools and Techniques to Identify and Capture Sialoglycans // edited by Rita Gerardy-Schahn, Philippe Delannoy, Mark von Itzstein
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-21317-2
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (IX, 254 p. 263 illus., 39 illus. in color.)
Collana	Topics in Current Chemistry, , 0340-1022 ; ; 367
Disciplina	572.548
Soggetti	Medicinal chemistry Bioorganic chemistry Biochemistry Medicinal Chemistry Bioorganic Chemistry Biochemistry, general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Sialic Acid Receptors of Viruses -- Endosialidases— versatile tools for the study of polysialic acid -- Advanced technologies in sialic acid and sialoglycoconjugate analysis -- Development and applications of the lectin microarray -- Sialoside Arrays: New Synthetic Strategies and Applications -- SIGLEC4 Antagonists -- Chemical Approach to A Whole Body Imaging of Sialo-N-linked Glycans -- Trypanosomal Trans-sialidases: Valuable Synthetic Tools and Targets for Medicinal Chemistry.
Sommario/riassunto	The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one

aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. Review articles for the individual volumes are invited by the volume editors. Readership: research chemists at universities or in industry, graduate students.
