

1. Record Nr.	UNINA9910298652903321
Autore	Kurdowski Wieslaw
Titolo	Cement and Concrete Chemistry // by Wieslaw Kurdowski
Pubbl/distr/stampa	Dordrecht : , : Springer Netherlands : , : Imprint : Springer, , 2014
ISBN	94-007-7945-3
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (705 p.)
Disciplina	620.136 691.3
Soggetti	Chemical engineering Ceramics Glass Composite materials Building materials Industrial Chemistry/Chemical Engineering Ceramics, Glass, Composites, Natural Materials Building Materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cement Kinds and Principles of their Classification -- Portland Cement Clinker -- Hydration of Clinker Phases -- Cement Hydration -- The Properties of Cement Paste -- Concrete Properties -- Mineral Additions for Cement Production -- Hydration of Cements with Mineral Additions -- Special Cements -- New Concretes.
Sommario/riassunto	This monograph describes cement clinker formation. It covers multicomponent systems, clinker phase structures and their reactions with water, hydrate composition and structure, as well as their physical properties. The mineral additions to cement are described as are their influence on cement-paste properties. Special cements are also discussed. The microstructure of concrete is then presented, and special emphasis is given to the role of the interfacial transition zone, and the corrosion processes in the light of cement-phase composition, mineral additions and w/c ratio. The admixtures' role in modern concrete technology is described with an emphasis on superplasticizer

chemistry and its cement-paste rheological modification mechanism. Cement with atypical properties, such as calcium aluminate, white, low energy and expansive cements are characterized. The last part of the book is devoted to special types of concrete such as self compacting and to reactive powders.
