

1. Record Nr.	UNINA9910298979903321
Autore	Noor Talal H
Titolo	Trust Management in Cloud Services // by Talal H. Noor, Quan Z. Sheng, Athman Bouguettaya
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2014
ISBN	3-319-12250-9
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (130 p.)
Disciplina	004 004.6 005.7 005.74
Soggetti	Application software Computer networks Management information systems Computer science Business Management science Information Systems Applications (incl. Internet) Computer Communication Networks Management of Computing and Information Systems Business and Management, general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Background -- Trust Management and Discovery of Cloud Services -- Robust and Adaptive Credibility Model -- Scalable Availability Model -- Cloud Service Crawler Engine -- Implementation and Performance Study -- Conclusions.
Sommario/riassunto	This book describes the design and implementation of Cloud Armor, a novel approach for credibility-based trust management and automatic discovery of cloud services in distributed and highly dynamic environments. This book also helps cloud users to understand the difficulties of establishing trust in cloud computing and the best

criteria for selecting a service cloud. The techniques have been validated by a prototype system implementation and experimental studies using a collection of real world trust feedbacks on cloud services. The authors present the design and implementation of a novel protocol that preserves the consumers' privacy, an adaptive and robust credibility model, a scalable availability model that relies on a decentralized architecture, and a cloud service crawler engine for automatic cloud services discovery. This book also analyzes results from a performance study on a number of open research issues for trust management in cloud environments including distribution of providers, geographic location and languages. These open research issues illustrate both an overview of the current state of cloud computing and potential future directions for the field. Trust Management in Cloud Services contains both theoretical and applied computing research, making it an ideal reference or secondary text book to both academic and industry professionals interested in cloud services. Advanced-level students in computer science and electrical engineering will also find the content valuable.
