1.	Record Nr.	UNINA9910298982503321
	Autore	Li Peng
	Titolo	Cooperative Device-to-Device Communication in Cognitive Radio Cellular Networks / / by Peng Li, Song Guo
	Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2014
	ISBN	3-319-12595-8
	Edizione	[1st ed. 2014.]
	Descrizione fisica	1 online resource (82 p.)
	Collana	SpringerBriefs in Computer Science, , 2191-5768
	Disciplina	621.38224
	Soggetti	Computer communication systems
		Electrical engineering
		Signal processing
		Image processing
		Speech processing systems
		Computer Communication Networks
		Communications Engineering, Networks
		Signal, Image and Speech Processing
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references at the end of each chapters.
	Nota di contenuto	Introduction -- Literature Survey on Cooperative Device-to-Device Communication -- Cooperative Device-to-Device Communication Architecture -- Capacity Maximization of Cooperative Device-to-Device Communication -- Energy Efficiency of Cooperative Device-to-Device Communication -- Cooperative Device-to-Device Communication for Broadcast -- Conclusion.
	Sommario/riassunto	This brief examines current research on cooperative device-to-device (D2D) communication as an enhanced offloading technology to improve the performance of cognitive radio cellular networks. By providing an extensive review of recent advances in D2D communication, the authors demonstrate that the quality of D2D links significantly affects offloading performance in cellular networks, which motivates the design of cooperative D2D communication. After presenting the architecture of cooperative D2D communication, the challenges of capacity maximization and energy efficiency are addressed by

optimizing relay assignment, power control and resource allocation. Furthermore, cooperative D2D communication is enhanced by network coding technology, and then is extended for broadcast sessions. Along with detailed problem formulation and hardness analysis, fast algorithms are developed by exploiting problem-specific characteristics such that they can be applied in practice.
