1. Record Nr.   UNINA9910299279903321

   Autore   Caterini Anthony L

   Titolo   Deep Neural Networks in a Mathematical Framework / / by Anthony L. Caterini, Dong Eui Chang

   Pubbl/distr/stampa Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018

   ISBN   3-319-75304-5

   Edizione   [1st ed. 2018.]

   Descrizione fisica 1 online resource (95 pages)

   Collana   SpringerBriefs in Computer Science, , 2191-5768

   Disciplina   006.32

   Soggetti   Artificial intelligence
                       Pattern recognition
                       Artificial Intelligence
                       Pattern Recognition

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Sommario/riassunto This SpringerBrief describes how to build a rigorous end-to-end mathematical framework for deep neural networks. The authors provide tools to represent and describe neural networks, casting previous results in the field in a more natural light. In particular, the authors derive gradient descent algorithms in a unified way for several neural network structures, including multilayer perceptrons, convolutional neural networks, deep autoencoders and recurrent neural networks. Furthermore, the authors developed framework is both more concise and mathematically intuitive than previous representations of neural networks. This SpringerBrief is one step towards unlocking the black box of Deep Learning. The authors believe that this framework will help catalyze further discoveries regarding the mathematical properties of neural networks.This SpringerBrief is accessible not only to researchers, professionals and students working and studying in the field of deep learning, but also to those outside of the neutral network community.
