Disciplina	325.21095694 956.04
Soggetti	Refugees, Palestinian Arab Arab-Israeli conflict - Reparations Arab-Israeli conflict - Refugees Reparations for historical injustices Restorative justice

Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Book Cover; Title; Copyright; Contents; Acknowledgements; Introduction; 1 Reparations in the Palestinian context; 2 Reparations: in search of a definition; 3 The German-Jewish Reparations Agreement of 1952; 4 Cyprus; 5 Prospects of reparations to Palestinian refugees; Conclusion; Notes; Bibliography; Index
Sommario/riassunto	This book delves into the issue of reparations in relation to Palestinian refugees in their search for a solution to their displacement and dispossession. Highlighting the broad spectrum of reparations available as forms of remedy for a historical injustice, the author probes the reasons behind the failure to reach a reparations agreement till the present day and discusses the significance of issues of apology, recognition and acknowledgement of responsibility. In its approach, the book departs from traditional and modern perceptions of reparations as featuring in international

Nota di contenuto	Chapter 1: Overview of Climate Change Science -- Chapter 2: Status of Climate Change Research -- Appendix A: Geologic Time -- Appendix B: The Metric System.
Sommario/riassunto	Composed of two extensive sections, this book surveys important work in climate change science, mainly in the United States, and introduces contributions to the body of science that have arrived on the scene between January 2013 and February 2014. The opening section offers a broad examination of contemporary climate change science, with subsections on the Intergovernmental Panel on Climate Change (IPCC); Earth's energy imbalance and energy flow; carbon dioxide's role in the

greenhouse effect; climate forcing, and climate feedbacks; Charles David Keeling and the Keeling Curve; the interfaces of atmosphere with oceans and land; paleoclimates and paleoclimatology; rising sea level; melting glaciers; deforestation; desertification; more violent storms, animal and human migration, extinction of species and more. The second section reviews and assesses the newest contributions to the body of research. Among the topics discussed are current and recent research on rising temperatures; the BEST study; the Global Historical Climatology Network (GHCN) and the National Climatic Data Center (NCDC); current and recent research on climate models, new research on global warming 56 million years ago; ecosystem impacts, projections of future climate and more. This book can be considered a bridge between the volumes of Farmer and Cook's Climate Change Science: A Modern Synthesis, as it arrives between the release of the first volume on the Physical Climate (2013) the second, on Earth's climate history, which is now in preparation. The book benefits a wide audience as its survey of the science of climate change provides an introduction to the subject and a discussion of current research in the field. The book may be used as a refresher for those who have had prior courses in climate science and related fields. Each chapter includes a comprehensive list of references for subjects discussed in the text.
