

1. Record Nr.	UNINA9910299467003321
Autore	Long Fei
Titolo	Satellite Network Robust QoS-aware Routing // by Fei Long
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2014
ISBN	3-642-54353-7
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (138 p.)
Disciplina	004.24 004.6 519 620
Soggetti	Electrical engineering Computer networks Information theory Computer software—Reusability Communications Engineering, Networks Computer Communication Networks Information and Communication, Circuits Performance and Reliability
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Satellite network constellation Design -- Satellite network routing strategies -- Satellite network traffic engineering -- Satellite network multi QoS objective routing algorithm -- Summary and outlook.
Sommario/riassunto	Satellite Network Robust QoS-aware Routing presents a novel routing strategy for satellite networks. This strategy is useful for the design of multi-layered satellite networks as it can greatly reduce the number of time slots in one system cycle. The traffic prediction and engineering approaches make the system robust so that the traffic spikes can be handled effectively. The multi-QoS optimization routing algorithm can satisfy various potential user requirements. Clear and sufficient illustrations are also presented in the book. As the chapters cover the

above topics independently, readers from different research backgrounds in constellation design, multi-QoS routing, and traffic engineering can benefit from the book. Fei Long is a senior engineer at Beijing R&D Center of 54th Research Institute of China Electronics Technology Group Corporation.
