1.	Record Nr.	UNINA9910299480003321
	Autore	Adhikari Animesh
	Titolo	Data analysis and pattern recognition in multiple databases / / Animesh Adhikari, Jhimli Adhikari, Witold Pedrycz
	Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , 2014
	ISBN	3-319-03410-3
	Edizione	[1st ed. 2014.]
	Descrizione fisica	1 online resource (xv, 238 pages) : illustrations
	Collana	Intelligent Systems Reference Library, , 1868-4394 ; ; 61
	Disciplina	006.3
	Soggetti	Data mining Engineering Optical pattern recognition
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	"ISSN: 1868-4394."
	Nota di bibliografia	Includes bibliographical references and index.
	Nota di contenuto	From the Contents: Synthesizing Different Extreme Association Rules in Multiple Data Sources -- Clustering items in time-stamped databases induced by stability -- Mining global patterns in multiple large databases -- Clustering Local Frequency Items in Multiple Data Sources -- Mining Patterns of Select Items in Different Data Sources.
	Sommario/riassunto	Pattern recognition in data is a well known classical problem that falls under the ambit of data analysis. As we need to handle different data, the nature of patterns, their recognition and the types of data analyses are bound to change. Since the number of data collection channels increases in the recent time and becomes more diversified, many real-world data mining tasks can easily acquire multiple databases from various sources. In these cases, data mining becomes more challenging for several essential reasons. We may encounter sensitive data originating from different sources - those cannot be amalgamated. Even if we are allowed to place different data together, we are certainly not able to analyse them when local identities of patterns are required to be retained. Thus, pattern recognition in multiple databases gives rise to a suite of new, challenging problems different from those encountered before. Association rule mining, global pattern discovery, and mining patterns of select items provide different patterns discovery techniques in multiple data sources. Some interesting item-based data analyses are also covered in this book. Interesting patterns, such as

exceptional patterns, icebergs and periodic patterns have been recently reported. The book presents a thorough influence analysis between items in time-stamped databases. The recent research on mining multiple related databases is covered while some previous contributions to the area are highlighted and contrasted with the most recent developments.
