1. Record Nr. UNINA9910299565603321

Autore	Chandrasekaran Srinivasan
Titolo	Dynamic Analysis and Design of Offshore Structures / / by Srinivasan Chandrasekaran
Pubbl/distr/stampa	Singapore : , : Springer Singapore : , : Imprint : Springer, , 2018
ISBN	981-10-6089-4
Edizione	[2nd ed. 2018.]
Descrizione fisica	1 online resource (XXXIV, 422 p. 122 illus., 80 illus. in color.)
Collana	Ocean Engineering & Oceanography, , 2194-6396 ; ; 9
Disciplina	627.98
Soggetti	Ocean engineering Mechanics Mechanics, Applied Oceanography Fossil fuels Offshore Engineering Solid Mechanics Fossil Fuels (incl. Carbon Capture)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction to Offshore Platforms -- Environmental Forces -- Introduction to Structural Dynamics -- Damping in Offshore Structures -- Hydrodynamic Response of Perforated Offshore Members -- Introduction to Stochastic Dynamics -- Applications in Preliminary Analysis and Design -- References -- Index.
Sommario/riassunto	This book introduces readers to various types of offshore platform geometries. It addresses the various environmental loads encountered by these structures, and provides detailed descriptions of the fundamentals of structural dynamics in a classroom style, helping readers estimate damping in offshore structures and grasp these aspects' applications in preliminary analysis and design. Basic concepts of structural dynamics are emphasized through simple illustrative examples and exercises. Design methodologies and guidelines, which are FORM based concepts, are explained through a selection of applied sample structures. Each chapter also features tutorials and exercises for self-learning. A dedicated chapter on stochastic dynamics helps

students to extend the basic concepts of structural dynamics to this advanced domain of research. Hydrodynamic response of offshore structures with perforated members is one of the most recent research applications, and has proven to be one of the most effective means of retrofitting offshore structures. In addition, the book integrates the concepts of structural dynamics with the FORM-evolved design of offshore structures, offering a unique approach. This new edition is divided into seven chapters, each of which has been updated. Each chapter also includes a section on frequently asked Questions and Answers (Q&A), which enhances understanding of this complex subject through easy and self-explanatory text. Furthermore, the book presents valuable content with respect to new and recent research carried out by the author in structural dynamics. All numeric examples have been re-checked with more additional explanations. New exercises have been added to improve understanding of the subject matter. Computer coding is also included (wherever possible) to aid computer-based learning of the contents of the book. The book can serve as a textbook for senior undergraduate and graduate courses in civil, structural, applied mechanics, mechanical, aerospace, naval architecture and ocean engineering programs. The book can also serve as a text for professional learning and development programs or as a guide for practicing and consulting offshore structural engineers. The contents of this book will be useful to graduate students, researchers, and professionals alike.
