

1. Record Nr.	UNINA9910299626603321
Autore	Crastan Valentin
Titolo	Global Energy Demand and 2-degree Target, Report 2014 // by Valentin Crastan
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2014
ISBN	3-319-12310-6
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (266 p.)
Disciplina	333.7 333.79 338926 551.6
Soggetti	Energy policy Energy and state Climate change Environmental economics Renewable energy resources Energy Policy, Economics and Management Climate Change/Climate Change Impacts Climate Change Environmental Economics Renewable and Green Energy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Summarizing Preview -- World -- OECD-34 -- EU-27 -- Middle East -- Eurasia+ -- Rest of Asia/Oceania -- Non-OECD America -- Africa -- G-20 -- G-20 countries, indicators and 2°C scenario -- Population, GDP, Energy and CO2 emissions of World, OECD, Non-OECD, G-20.
Sommario/riassunto	This report takes a neutral and independent point of view in attempting to show concrete ways to achieve the goal of reducing CO2 emissions and limiting global warming to the 2-degree target. It presents an overall picture spanning all key countries. In the report, the temporal

evolution of the main parameters is given from 1970 to 2011 for all regions of the world and all G-20 countries, starting from the basic data, gross domestic consumption. The parameters are then extrapolated to 2030, taking into account current trends, local factors and the requirements of the 2-degree climate target. An important basis is the structure of the current energy consumption and energy flows of all regions of the world and all G-20 countries, which is analyzed in the appendix in detail and reproduced as clearly as possible. The reports from climate science make it clear that with a greater level of warming, adaptation is the more expensive option. Compliance with the 2-degree climate target is a challenge, but not impossible. The book is intended not only for the scientific community but also for decision makers in government and industry.
