Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This book provides a detailed examination of foreign direct investment (FDI) inflows in Central and Eastern Europe (CEE) after closer integration in the European Union. An important facet of European economic integration was the development of a free-trade area in Central and Eastern Europe, which improved market accessibility. However, to date these relations have been little explored theoretically. The book examines foreign investments in different transition countries from both a theoretical and an empirical perspective. It analyzes changes in

the choice of location by foreign investors in nineteen CEE countries between 1992 and 2015, and shows that it is linked to the removal of intra-regional trade barriers. The findings suggest that regional integration increases the incentives for multinationals to invest in the participating countries, especially in those with larger markets and lower production costs.
