

1. Record Nr.	UNINA9910299702603321
Autore	Akbarov Surkay D
Titolo	Dynamics of Pre-Strained Bi-Material Elastic Systems : Linearized Three-Dimensional Approach // by Surkay D. Akbarov
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-14460-X
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (1018 p.)
Disciplina	004 620 620.1 620.11
Soggetti	Mechanics Mechanics, Applied Computer mathematics Materials science Solid Mechanics Computational Science and Engineering Characterization and Evaluation of Materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	1 Introduction -- 2 Dynamics of a moving and oscillating moving load acting on a pre-strained bi-material layered systems -- 3 Forced vibration of pre-stressed layered bodies -- 4 Wave propagation in pre-strained layered systems -- 5 Torsional wave dispersion in pre-stressed compound cylinders -- 6 Axisymmetric longitudinal and flexural wave propagation in pre-strained bi-material compound circular cylinders -- 7 Supplement 1: Some stability loss and wave propagation problems regarding the double-walled carbon nanotube (DWCNT) -- 8 Supplement 2: On one application of the approach developed in Chapter 3 on the dynamics of pre-strained hydro-elastic systems -- 9 Supplement 3: Some problems on the sandwich plate-strip with piezoelectric face and elastic core layers containing interface

cracks -- 10 Supplement 4: Forced vibration of the initially stressed rectangular plates with holes and inclusions.

---

Sommario/riassunto

This book deals with dynamics of pre-stressed or pre-strained bi-material elastic systems consisting of stack of pre-stressed layers, stack of pre-stressed layers and pre-stressed half space (or half plane), stack of pre-stressed layers as well as absolute rigid foundation, pre-stressed compound solid and hollow cylinders and pre-stressed sandwich hollow cylinders. The problems considered in the book relate to the dynamics of a moving and oscillating moving load, forced vibration caused by linearly located or point located time-harmonic forces acting to the foregoing systems. Moreover, a considerable part of the book relate to the problems regarding the near surface, torsional and axisymmetric longitudinal waves propagation and dispersion in the noted above bi-material elastic systems. The book carries out the investigations within the framework of the piecewise homogeneous body model with the use of the Three-Dimensional Linearized Theory of Elastic Waves in Initially Stressed Bodies.
