

1. Record Nr.	UNINA9910299752203321
Autore	Michaelides Efstathios <1955->
Titolo	Nanofluidics : Thermodynamic and Transport Properties // by Efstathios E. (Stathis) Michaelides
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2014
ISBN	3-319-05621-2
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (351 p.)
Disciplina	620 620.1064 620.5 621.4021
Soggetti	Thermodynamics Heat engineering Heat - Transmission Mass transfer Fluid mechanics Nanotechnology Engineering Thermodynamics, Heat and Mass Transfer Engineering Fluid Dynamics Nanotechnology and Microengineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Fundamentals of nanoparticle flow and heat transfer -- Characteristics of nanofluids -- Thermodynamic properties -- Viscosity -- Thermal conductivity -- Convection and boiling -- Diffusivity -- Epilogue.
Sommario/riassunto	This volume offers a comprehensive examination of the subject of heat and mass transfer with nanofluids as well as a critical review of the past and recent research projects in this area. Emphasis is placed on the fundamentals of the transport processes using particle-fluid suspensions, such as nanofluids. The nanofluid research is examined and presented in a holistic way using a great deal of our experience

with the subjects of continuum mechanics, statistical thermodynamics, and non-equilibrium thermodynamics of transport processes. Using a thorough database, the experimental, analytical, and numerical advances of recent research in nanofluids are critically examined and connected to past research with medium and fine particles as well as to functional engineering systems. Promising applications and technological issues of heat/mass transfer system design with nanofluids are also discussed. This book also:

- Provides a deep scientific analysis of nanofluids using classical thermodynamics and statistical thermodynamics to explain and interpret experimental observations
- Presents the theory and experimental results for both thermodynamic and transport properties. Examines all transport properties and transport processes as well as their relationships through the pertinent macroscopic coefficients
- Combines recent knowledge pertaining to nanofluids with the previous fifty years of research on particulate flows, including research on transient flow and heat transfer of particulate suspensions
- Conducts an holistic examination of the material from more than 500 archival publications.
