

1. Record Nr.	UNINA9910299764403321
Titolo	Advances in Architectural Geometry 2014 // edited by Philippe Block, Jan Knippers, Niloy J. Mitra, Wenping Wang
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-11418-2
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (379 p.)
Disciplina	003.3 510 516.36 519
Soggetti	Applied mathematics Engineering mathematics Computer simulation Computer-aided engineering Differential geometry Civil engineering Mathematics Applications of Mathematics Simulation and Modeling Computer-Aided Engineering (CAD, CAE) and Design Differential Geometry Civil Engineering Mathematics in Art and Architecture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Simulation of Aggregate Structures in Architecture: Distinct-Element Modeling of Synthetic Non-Convex Granulates: K. Dierichs and A. Sommario/riassunto

This book contains 24 technical papers presented at the fourth edition of the Advances in Architectural Geometry conference, AAG 2014, held in London, England, September 2014. It offers engineers, mathematicians, designers, and contractors insight into the efficient design, analysis, and manufacture of complex shapes, which will help open up new horizons for architecture. The book examines geometric aspects involved in architectural design, ranging from initial conception to final fabrication. It focuses on four key topics: applied geometry, architecture, computational design, and also practice in the form of case studies. In addition, the book also features algorithms, proposed implementation, experimental results, and illustrations. Overall, the book presents both theoretical and practical work linked to new geometrical developments in architecture. It gathers the diverse components of the contemporary architectural tendencies that push the building envelope towards free form in order to respond to multiple current design challenges. With its introduction of novel computational algorithms and tools, this book will prove an ideal resource to both

newcomers to the field as well as advanced practitioners.
