   Autore   Reyes Juan Carlos de los

   Titolo   Numerical PDE-Constrained Optimization / / by Juan Carlos De los Reyes

   Pubbl/distr/stampa   Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015

   ISBN   3-319-13395-0

   Edizione   [1st ed. 2015.]

   Descrizione fisica   1 online resource (129 p.)

   Collana   SpringerBriefs in Optimization, , 2191-575X

   Disciplina   510
                           511/.8
                           515.353
                           518
                           519.6

   Soggetti   Mathematical optimization
                           Differential equations
                           Numerical analysis
                           Optimization
                           Differential Equations
                           Numerical Analysis

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Note generali   Description based upon print version of record.

   Nota di bibliografia   Includes bibliographical references and index.

   Nota di contenuto   Introduction -- Basic Theory of Partial Differential Equations and Their Discretization -- Theory of PDE-constrained Optimization -- Numerical Optimization Methods -- Box-constrained Problems -- Nonsmooth PDE-constrained Optimization.

   Sommario/riassunto This book introduces, in an accessible way, the basic elements of Numerical PDE-Constrained Optimization, from the derivation of optimality conditions to the design of solution algorithms. Numerical optimization methods in function-spaces and their application to PDE-constrained problems are carefully presented. The developed results are illustrated with several examples, including linear and nonlinear ones. In addition, MATLAB codes, for representative problems, are included. Furthermore, recent results in the emerging field of

nonsmooth numerical PDE constrained optimization are also covered. The book provides an overview on the derivation of optimality conditions and on some solution algorithms for problems involving bound constraints, state-constraints, sparse cost functionals and variational inequality constraints.
