

1. Record Nr.	UNINA9910299848003321
Titolo	Biomedical Technology // edited by Thomas Lenarz, Peter Wriggers
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
ISBN	3-319-10981-2
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (192 p.)
Collana	Lecture Notes in Applied and Computational Mechanics, , 1613-7736 ; ; 74
Disciplina	610.113
Soggetti	Mechanics Mechanics, Applied Biomedical engineering Health informatics Solid Mechanics Biomedical Engineering and Bioengineering Health Informatics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	From the Contents: RVE procedure for estimating the elastic properties of inhomogeneous microstructures such as bone tissue -- A gradient-enhanced continuum damage model for residually stressed fibre-reinforced materials at finite strains -- A mechanically stimulated fracture healing model using a finite element framework.
Sommario/riassunto	During the last years computational methods lead to new approaches that can be applied within medical practice. Based on the tremendous advances in medical imaging and high-performance computing, virtual testing is able to help in medical decision processes or implant designs. Current challenges in medicine and engineering are related to the application of computational methods to clinical medicine and the study of biological systems at different scales. Additionally manufacturers will be able to use computational tools and methods to predict the performance of their medical devices in virtual patients. The physical and animal testing procedures could be reduced by virtual prototyping of medical devices. Here simulations can enhance the

performance of alternate device designs for a range of virtual patients. This will lead to a refinement of designs and to safer products. This book summarizes different aspects of approaches to enhance function, production, initialization and complications of different types of implants and related topics.
