1. Record Nr. UNINA9910299848003321 Biomedical Technology / / edited by Thomas Lenarz, Peter Wriggers Titolo Cham:,: Springer International Publishing:,: Imprint: Springer,, Pubbl/distr/stampa 2015 **ISBN** 3-319-10981-2 Edizione [1st ed. 2015.] Descrizione fisica 1 online resource (192 p.) Collana Lecture Notes in Applied and Computational Mechanics, , 1613-7736; ; 74 Disciplina 610.113 Soggetti Mechanics Mechanics, Applied Biomedical engineering Health informatics Solid Mechanics Biomedical Engineering and Bioengineering **Health Informatics** Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Note generali Description based upon print version of record. Nota di bibliografia Includes bibliographical references at the end of each chapters. Nota di contenuto From the Contents: RVE procedure for estimating the elastic properties of inhomogeneous microstructures such as bone tissue -- A gradientenhanced continuum damage model for residually stressed fibrereinforced materials at finite strains -- A mechanically stimulated fracture healing model using a finite element framework. Sommario/riassunto During the last years computational methods lead to new approaches that can be applied within medical practice. Based on the tremendous advances in medical imaging and high-performance computing, virtual testing is able to help in medical decision processes or implant designs. Current challenges in medicine and engineering are related to the application of computational methods to clinical medicine and the study of biological systems at different scales. Additionally manufacturers will be able to use computational tools and methods to predict the performance of their medical devices in virtual patients. The physical and animal testing procedures could be reduced by virtual prototyping of medical devices. Here simulations can enhance the

performance of alternate device designs for a range of virtual patients. This will lead to a refinement of designs and to safer products. This book summarizes different aspects of approaches to enhance function, production, initialization and complications of different types of implants and related topics.
