| Note generali | Previously issued in print: London: Karnac, 2011. |
| Nota di bibliografia | Includes bibliographical references and index. |
| Nota di contenuto | pt. 1. The origins of the concept of the social unconscious -- pt. 2. The organismic and neurobiological perspective -- pt. 3. The relational and interpersonal perspective -- pt. 5. The mind of the social system -- pt. 5. The matrix of the social system -- pt. 6. The numinous and the unknown. |
| Sommario/riassunto | The social unconscious is vital for understanding persons and their groupings, ranging from families to societies, committees to organisations, and from small to median to large therapeutic groups, and essential for comprehensive clinical work. This series of volumes of contributions from an international network of psychoanalysts, analytical psychologists, group analysts and psychodramatists draw on the classical ideas of Freud, Klein and Jung, Bion, Foulkes and Moreno, and on contemporary relational perspectives, self-psychology and neuroscience. Volume I is concerned mainly with the theory |

-- Schema Mappings: from Data Translation to Data Cleaning.

Sommario/riassunto

This book offers readers a comprehensive guide to the evolution of the database field from its earliest stages up to the present—and from classical relational database management systems to the current Big Data metaphor. In particular, it gathers the most significant research from the Italian database community that had relevant intersections with international projects. Big Data technology is currently dominating both the market and research. The book provides readers with a broad overview of key research efforts in modelling, querying and analysing data, which, over the last few decades, have become massive and heterogeneous areas.
