

1. Record Nr.	UNINA9910299922603321
Titolo	Advanced Maintenance Modelling for Asset Management [[electronic resource]] : Techniques and Methods for Complex Industrial Systems / / edited by Adolfo Crespo Márquez, Vicente González-Prida Díaz, Juan Francisco Gómez Fernández
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-319-58045-0
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (XXI, 467 p. 144 illus., 69 illus. in color.)
Disciplina	658.5
Soggetti	Engineering economics Engineering economy Mathematical optimization Probabilities Production management Quality control Reliability Industrial safety Operations research Decision making Engineering Economics, Organization, Logistics, Marketing Optimization Probability Theory and Stochastic Processes Operations Management Quality Control, Reliability, Safety and Risk Operations Research/Decision Theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Part I: Introduction -- Chapter 1: Asset Management in the Context of the Industry 4.0 -- Part II: A Changing Asset Management Framework -- Chapter 2: A Maintenance Management Framework Based on PAS 55 -- Chapter 3: The Integration of Open Reliability, Maintenance and

Condition Monitoring Management Systems -- Chapter 4: Prognostics and Health Management in Advanced Maintenance Systems -- Chapter 5: A Framework for Effective Management of CBM Programs -- Part III: Pursuing High Management Effectiveness in a Dynamic Environment -- Chapter 6: Criticality Analysis for Maintenance Purposes -- Chapter 7: AHP Method Adapted to a Changing Environment -- Chapter 8: Reliability Stochastic Modeling for Repairable Physical Assets. Case Study Applied to the Chilean Mining -- Chapter 9: Economic Impact of a Failure Using Life Cycle Cost Analysis -- Part IV: Advanced Methods and Techniques to Improve Management Efficiency -- Chapter 10: On-line Reliability and Risk to Schedule the Preventive Maintenance in Network Utilities -- Chapter 11: Customer-oriented Risk Assessment in Network Utilities -- Chapter 12: Analysis of Dynamic Reliability Surveillance.-Part V: The Need for Innovation in Assessment and Control -- Chapter 13: A Quantitative Graphical Analysis to Support Maintenance -- Chapter 14: Case Study of Graphical Analysis for Maintenance Management -- Chapter 15: A Graphical Method to Support Operation Performance Assessment -- Chapter 16: A Practical Method for the Maintainability Assessment -- Part VI: Continuous Improvement Through Emergent Process and Technologies.-Chapter 17: Value-driven Engineering of E-Maintenance Platforms -- Chapter 18: Assistance to Dynamic Maintenance Tasks by Ann Based Models -- Chapter 19: Availability Model Under Overcapacity and Load Sharing Restrictions -- Chapter 20: Influence of the Input Load on the Reliability of the Grinding Line -- Part VII: Results and Conclusions -- Chapter 21: Summary of Result and Conclusions.

Sommario/riassunto

This book promotes and describes the application of objective and effective decision making in asset management based on mathematical models and practical techniques that can be easily implemented in organizations. This comprehensive and timely publication will be an essential reference source, building on available literature in the field of asset management while laying the groundwork for further research breakthroughs in this field. The text provides the resources necessary for managers, technology developers, scientists and engineers to adopt and implement better decision making based on models and techniques that contribute to recognizing risks and uncertainties and, in general terms, to the important role of asset management to increase competitiveness in organizations.
