1. Record Nr. UNINA9910299952903321

Autore	Frasca Mattia
Titolo	Synchronization in Networks of Nonlinear Circuits : Essential Topics with MATLAB® Code / / by Mattia Frasca, Lucia Valentina Gambuzza, Arturo Buscarino, Luigi Fortuna
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-319-75957-4
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (viii, 109 pages)
Collana	SpringerBriefs in Nonlinear Circuits, , 2520-1433
Disciplina	003.54
Soggetti	Electronic circuits Information theory Electrical engineering Circuits and Systems Electronic Circuits and Devices Information and Communication, Circuits Communications Engineering, Networks
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Dynamical Systems -- Networks -- Synchronization in Networks -- Beyond Global Synchronization -- Control of Synchronization -- Conclusions.
Sommario/riassunto	This book addresses synchronization in networks of coupled systems. It illustrates the main aspects of the phenomenon through concise theoretical results and code, allowing readers to reproduce them and encouraging readers to pursue their own experimentation. The book begins by introducing the mathematical representation of nonlinear circuits and the code for their simulation. This is followed by a brief account of the concept of the complex network, which describes the main aspects of complex networks and the main model types, with a particular focus on the code used to study and reproduce the models. The focus then shifts to the process through which independent nonlinear circuits that follow different trajectories without coupling share some properties of their motion: synchronization. The authors

present the main techniques for studying synchronization in complex networks, including the major measures, the stability properties and control techniques. The book then moves on to advanced topics in synchronization of complex networks by examining forms of synchronization in which not all the units share the same trajectory, namely chimera states, clustering synchronization, and relay and remote synchronization. Simple codes for experimentation with these topics and control methods are also provided. In closing, the book addresses the problem of synchronization in time-varying networks.
