Sommario/riassunto	Bridging psychological theory and educational practice, this is an innovative textbook on the emotional and social aspects of young people's development. Bosacki's Social Cognition in Middle Childhood and Adolescence, First Edition moves beyond tradition cognitivist

representations of how children learn and grow, focusing on how to integrate the emotional, cognitive, moral, spiritual and social in young people's experiences. This text bridges the gap between theory and practice; analyses cutting edge research and translates it into culturally sensitive and developmentally appropriate strategies for future educational practice. -- Provided by publisher

<b>Sommario/riassunto</b>	This book is an homage to the pioneering works of E. Aero and G. Maugin in the area of analytical description of generalized continua. It presents a collection of contributions on micropolar, micromorphic and strain gradient media, media with internal variables, metamaterials, beam lattices, liquid crystals, and others. The main focus is on wave propagation, stability problems, homogenization, and relations

between discrete and continuous models.
