1. Record Nr. UNINA9910299979703321

   Autore   Liu Chongyang

   Titolo   Optimal Control of Switched Systems Arising in Fermentation Processes / / by Chongyang Liu, Zhaohua Gong

   Pubbl/distr/stampa Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2014

   ISBN   3-662-43793-7

   Edizione   [1st ed. 2014.]

   Descrizione fisica 1 online resource (191 p.)

   Collana   Springer Optimization and Its Applications, , 1931-6828 ; ; 97

   Disciplina   510
                 515.352
                 515.64
                 518

   Soggetti   Calculus of variations
                 Mathematical optimization
                 Differential equations
                 Numerical analysis
                 Calculus of Variations and Optimal Control; Optimization
                 Optimization
                 Ordinary Differential Equations
                 Numerical Analysis

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali Description based upon print version of record.

   Nota di bibliografia Includes bibliographical references.

   Nota di contenuto Introduction -- Mathematical Preliminaries -- Constrained Mathematical Programming -- Elements of Optimal Control Theory -- Optimal Control of Nonlinear Multistage Systems -- Optimal Control of Switched Autonomous Systems -- Optimal Control of Time-dependent Switched Systems -- Optimal Control of State-dependent Switched Systems -- Optimal Parameter Selection of Multistage Time-delay Systems -- Optimal Control of Multistage Time-delay Systems -- Optimal Control of Switched Time-delay Systems.

   Sommario/riassunto The book presents, in a systematic manner, the optimal controls under different mathematical models in fermentation processes. Variant mathematical models – i.e., those for multistage systems; switched

autonomous systems; time-dependent and state-dependent switched systems; multistage time-delay systems and switched time-delay systems – for fed-batch fermentation processes are proposed and the theories and algorithms of their optimal control problems are studied and discussed. By putting forward novel methods and innovative tools, the book provides a state-of-the-art and comprehensive systematic treatment of optimal control problems arising in fermentation processes. It not only develops nonlinear dynamical system, optimal control theory and optimization algorithms, but can also help to increase productivity and provide valuable reference material on commercial fermentation processes.
