1.	Record Nr.	UNINA9910299988903321
	Autore	Pavliotis Grigorios A
	Titolo	Stochastic Processes and Applications [[electronic resource]] : Diffusion Processes, the Fokker-Planck and Langevin Equations / / by Grigorios A. Pavliotis
	Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 2014
	ISBN	1-4939-1323-9
	Edizione	[1st ed. 2014.]
	Descrizione fisica	1 online resource (XIII, 339 p. 29 illus., 23 illus. in color.)
	Collana	Texts in Applied Mathematics, , 0939-2475 ; ; 60
	Disciplina	515.4
	Soggetti	Probabilities
		Partial differential equations
		Mechanics
		Mechanics, Applied
		Mathematical physics
		Probability Theory and Stochastic Processes
		Partial Differential Equations
		Theoretical and Applied Mechanics
		Theoretical, Mathematical and Computational Physics
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Bibliographic Level Mode of Issuance: Monograph
	Nota di bibliografia	Includes bibliographical references (pages 321-334) and index.
	Nota di contenuto	Stochastic Processes -- Diffusion Processes -- Introduction to Stochastic Differential Equations -- The Fokker-Planck Equation -- Modelling with Stochastic Differential Equations -- The Langevin Equation -- Exit Problems for Diffusions -- Derivation of the Langevin Equation -- Linear Response Theory -- Appendix A Frequently Used Notations -- Appendix B Elements of Probability Theory.
	Sommario/riassunto	This book presents various results and techniques from the theory of stochastic processes that are useful in the study of stochastic problems in the natural sciences. The main focus is analytical methods, although numerical methods and statistical inference methodologies for studying diffusion processes are also presented. The goal is the development of techniques that are applicable to a wide variety of stochastic models that appear in physics, chemistry and other natural sciences.

Applications such as stochastic resonance, Brownian motion in periodic potentials and Brownian motors are studied and the connection between diffusion processes and time-dependent statistical mechanics is elucidated. The book contains a large number of illustrations, examples, and exercises. It will be useful for graduate-level courses on stochastic processes for students in applied mathematics, physics and engineering. Many of the topics covered in this book (reversible diffusions, convergence to equilibrium for diffusion processes, inference methods for stochastic differential equations, derivation of the generalized Langevin equation, exit time problems) cannot be easily found in textbook form and will be useful to both researchers and students interested in the applications of stochastic processes.
