| Sommario/riassunto | Although consistently overlooked or dismissed, John 8.6, 8 in the Pericope Adulterae is the only place in canonical or non-canonical Jesus |

tradition that portrays Jesus as writing. After establishing that John 8.6, 8 is indeed a claim that Jesus could write, this book offers a new interpretation and transmission history of the Pericope Adulterae . Not only did the pericope's interpolator place the story in John's Gospel in order to highlight the claim that Jesus could write, but he did so at John 7.53–8.11 as a result of carefully reading the Johannine narrative. The final chapter of the book proposes a plausible socio-historical context for the insertion of the story.

Sommario/riassunto

This book gives an overview of the current knowledge on the most common neurodegenerative diseases, including Alzheimer's disease, frontotemporal lobar degeneration, amyotrophic lateral sclerosis, and additional neurodegenerative diseases. Different aspects of each disease are reviewed, including clinical issues, treatments, basic discoveries (genetics and molecular biology), and translation of basic research into biomarkers for early diagnosis. In addition, emerging data indicate that neurodegeneration seems to also be present in classically non-degenerative disorders. Therefore, a chapter about overlapping mechanisms between dementias and psychiatric disorders is included, as well as a description of the role of neurodegeneration in multiple sclerosis. Neurodegenerative Diseases is aimed at clinicians, particularly those working in academic hospitals. This multidisciplinary book will also be of interest to basic researchers in medical fields.
